ATEX 1G	
Instruction	Manual electrical apparatus for hazardous areas
Device category 1G Directive conformity	for use in hazardous areas with gas, vapour and mist 94/9/EG
Standard conformity	EN 60079-0:2006, EN 60079-11:2007, EN 60079-26:2007 Ignition protection "Intrinsic safety" Use is restricted to the following stated conditions
CE symbol	€ € 0102
Ex-identification EC-Type Examination Certificate	€x) II 1G Ex ia IIC T6 PTB 00 ATEX 2049 X
Appropriate type	NJ 5-18GK-SN
Effective internal capacitance C _i Effective internal inductance L _i Cable length	 ≤ 120 nF ; a cable length of 10 m is considered. ≤ 200 μH ; a cable length of 10 m is considered. Dangerous electrostatic charges on the fixed connection cable must be taken into account for lengths equal to and exceeding the following values:
Explosion group IIA	78 cm
Explosion group IIB	39 cm
Explosion group IIC	6 cm
General	The apparatus has to be operated according to the appropriate data in the data sheet and in this instruction manual. The EC-Type Examination Certificate has to be observed. The special conditions must be adhered to!
Highest permissible ambient temperature	The temperature ranges, according to temperature class, are given in the EC-Type Examination Certificate. Note: Use the temperature table for category 1 !!! The 20 % reduction in accordance with EN 1127-1:2007 has already been accounted for in the temperature table for category 1.
Installation, Comissioning	Laws and/or regulations and standards governing the use or intended usage goal must be observed. The intrinsic safety is only assured in connection with an appropriate related apparatus and according to the proof of intrinsic safety. The associated apparatus must satisfy the requirements of category ia. Due to the possible danger of ignition, which can arise due to faults and/or transient currents in the equipotential bonding system, galvanic isolation of the power supply and signal circuit is preferable. Associated apparatus without electrical isolation must only be used if the appropriate requirements of IEC 60079-14 are met.
Maintenance	No changes can be made to apparatus, which are operated in hazardous areas. Repairs to these apparatus are not possible.
Special conditions	
Protection from mechanical danger	When used in the temperature range below -20 $^\circ\mathrm{C}$ the sensor should be protected from knocks by the provision of an additional housing.
Electrostatic charging	When used in group IIC non-permissible electrostatic charges should be avoided on the plastic housing parts.

 \leq 120 nF ; a cable length of 10 m is considered. \leq 200 μH ; a cable length of 10 m is considered.

The apparatus has to be operated according to the appropriate data in the data sheet and in this instruction manual.

The EC-Type Examination Certificate has to be observed.

The special conditions must be adhered to!

The maximum surface temperature of the housing is given in the EC-Type Examination Certificate

Laws and/or regulations and standards governing the use or intended usage goal must be observed.

The intrinsic safety is only assured in connection with an appropriate related apparatus and according to the proof of intrinsic safety.

The associated apparatus must satisfy at least the requirements of category ia IIB or iaD. Because of the possibility of the danger of ignition, which can arise due to faults and/or transient currents in the equipotential bonding system, galvanic isolation in the power supply and signal circuits is preferable. Associated apparatus without electrical isolation must only be used if the appropriate requirements of IEC 60079-14 are met. The intrinsically safe circuit has to be protected against influences due to lightning.

The adhesive label provided must be affixed in the immediate vicinity of the sensor! The surface to which the label is applied must be clean, flat and free from grease! The affixed adhesive label must be readable and durable, taking account of the possibility of chemical corrosion!

When used in the isolating wall between Zone 20 and Zone 21 or Zone 21 und Zone 22 the sensor must not be exposed to any mechanical danger and must be sealed in such a way, that the protective function of the isolating wall is not impaired. The applicable directives and standards must be observed.

No changes can be made to apparatus, which are operated in hazardous areas. Repairs to these apparatus are not possible.

The connection cables are to be laid in accordance with EN 50281-1-2 and must not normally be subjected to chaffing during use.

ATEX 3G (ic)	
Instruction	Manual electrical apparatus for hazardous areas
Device category 3G (ic) Directive conformity Standard conformity CE symbol	for use in hazardous areas with gas, vapour and mist 94/9/EG EN 60079-11:2007 Ignition protection category "ic" Use is restricted to the following stated conditions €€0102
Ex-identification	(Ex) II 3G Ex ic IIC T6 X The Ex-significant identification is on the enclosed adhesive label
Effective internal capacitance Ci	\leq 120 nF ; A cable length of 10 m is considered.
Effective internal inductance Li	$\leq 200~\mu H$; A cable length of 10 m is considered.
General	The apparatus has to be operated according to the appropriate data in the data sheet and in this instruction manual. The data stated in the data sheet are restricted by this operating instruction! The special conditions must be observed! Directive 94/9EG is generally applicable only to the use of electrical apparatus ope- rating at atmospheric conditions. If the equipment is not used under atmospheric conditions, a reduction of the per- missible minimum ignition energies may have to be taken into consideration.
Installation, Comissioning	Laws and/or regulations and standards governing the use or intended usage goal must be observed. The sensor must only be operated with energy-limited circuits, which satisfy the requirements of IEC 60079-11. The explosion group depends on the connected and energy-limited supply circuit. The adhesive label provided must be affixed in the immediate vicinity of the sensor! The surface to which the label is applied must be clean, flat and free from grease! The affixed adhesive label must be readable and durable, taking account of the possibility of chemical corrosion!
Maintenance	No changes can be made to apparatus, which are operated in hazardous areas. Repairs to these apparatus are not possible.
Special conditions	de la construcción de la
Maximum permissible ambient temperature T_{Umax} at Ui = 20 V	
for Pi=34 mW, li=25 mA, T6	70 °C (158 °F)
for Pi=34 mW, li=25 mA, T5	85 °C (185 °F)
for Pi=34 mW, li=25 mA, T4-T1	100 °C (212 °F)
for Pi=64 mW, li=25 mA, T6	69 °C (156.2 °F)
for Pi=64 mW, li=25 mA, T5	84 °C (183.2 °F)
for Pi=64 mW, li=25 mA, T4-T1	100 °C (212 °F)
for Pi=169 mW, li=52 mA, T6	51 °C (123.8 °F)
for Pi=169 mW, li=52 mA, T5	66 °C (150.8 °F)
for Pi=169 mW, li=52 mA, T4-T1	80 °C (176 °F)
for Pi=242 mW, li=76 mA, T6	39 °C (102.2 °F)
for Pi=242 mW, li=76 mA, T5	54 °C (129.2 °F)
for Pi=242 mW, li=76 mA, T4-T1	61 °C (141.8 °F)
Protection from mechanical danger	The sensor must not be mechanically damaged. When used in the temperature range below -20 °C the sensor should be protected from knocks by the provision of an additional housing.
	-

The connection parts are to be installed, such that a minimum protection class of IP20 is achieved, in accordance with IEC 60529.
